REMOTE WORK WITH BRICK-AND-MORTAR LEVEL SECURITY

Sutherland Sentinel AI™ Delivers Security for Work From Anywhere

ARE YOUR REMOTE WORKFORCE SYSTEMS TRULY SECURE?

Organizations around the world are still adjusting to how and where their teams work. Now the post-pandemic hybrid/fully virtual work model is here to stay, leaders need to implement a future state of work that meets their team and business needs.

Adopting and supporting a hybrid model enterprise-wide comes with a range of inherent security risks, especially for businesses that require their team members to access confidential and private data. This coupled with regional and local data privacy and security regulations means there is a pressing need for a solution that can protect private and sensitive information regardless of where employees work from.

Brick-and-mortar level security. Peace of mind for production leaders. Confidence for clients. Deliver all three with Sutherland Sentinel AI™

A NEW APPROACH FOR THE NEW NORMAL

Sentinel AI™ is an AI-driven, cognitive, enterprise-grade customer data security & remote employee productivity solution that delivers brick-and-mortar level security in a remote work environment. Sentinel AI™ enables companies to adopt best practices, security hardening, and robust testing, with no change to existing applications.

Million Hours Secured	**Employees Secured**	**Events Secured**	**Compliance**

SECURE YOUR REMOTE WORKFORCE OPERATIONS

Sutherland Sentinel AI™ allows remote employees to continue working productively while adhering to company and client security policies. A cost-effective, bandwidth-friendly, and easily deployable solution, Sutherland Sentinel AI™ helps global enterprises to secure remote environments, delivering enhanced productivity and call experience.

Sentinel Vision. Dynamic webcam image analysis allows for real-time, ongoing authentication of remote staff based on AI-driven cognitive detection. Access a searchable database of image capture history and trigger pre-defined actions when an anomaly is detected.

Sentinel Audio. Sentinel Audio employs state-of-the-art Edge-based AI models to identify the presence of multiple individuals in a workplace, along with detecting elevated ambient noise levels. Depending on predefined rules, proactive protective measures can be implemented to prevent potential information leakage.

Sentinel Shield. Mask PII/PHI data on any browser screen based on security, privacy, and regulatory needs. Fields of information can be redacted, partially masked, or completely masked.

Designed by CIOs for CIOs, and built on top of proven enterprise-grade platforms, Sutherland Sentinel AI™ is the most comprehensive remote worker security suite available.

Secure your people. Secure your data. Pass the audit.
